Laboratory Animal Procedure Reporting System · Laboratory Animal Service Center, Prince of Songkla University

เปิดระบบที่ / Open the system at kwanchanokd.github.io/psu-lasc-animal-report

สารบัญ Contents

1. ระบบนี้ใช้ทำอะไร What this system is for

The system lets researchers **report procedures performed on laboratory animals** under a protocol number approved by the Animal Research Ethics Committee, and **raise an emergency or animal-health alert** that reaches the veterinary team immediately.

สิ่งที่ทำได้ What you can do	ใช้เมื่อไร When to use it
📝 **รายงานใหม่** New report	After euthanasia, off-site transport of animals, or an animal dying during the study.
🚨 **แจ้งเหตุ / สุขภาพสัตว์** Emergency / health alert	When you find a sick or injured animal, or any emergency in the animal room — delivered to the vets by LINE and email at once.
🗂️ **ประวัติการรายงาน** History	View, edit, print the A4 PDF form and export to Excel for submission to the committee.
📊 **สรุปผล** Summary	See how many animals have been reported, broken down by procedure, method, species and protocol.

The system tracks your animal numbers. When you pick a protocol number it shows the approved number, the number already reported and the remaining balance. If the total exceeds the approved number the system warns you and flags the report as *over the approved number* for staff to review.

2. เริ่มต้นใช้งาน — ลงทะเบียนครั้งเดียว Getting started — register once

1. Open kwanchanokd.github.io/psu-lasc-animal-report in a browser (Chrome / Edge / Safari), on a computer or a phone.
2. Tap 「🔑 เข้าสู่ระบบ」 **(Sign in)** at the top right, then choose the 「📝 ลงทะเบียนนักวิจัย」 **(Register as researcher)** tab.
3. Enter your **full name, email and a password** (at least 6 characters). Department and phone number are optional.
4. **เลือกบทบาทในงานวิจัย** Role
   - 5. 🎓 **หัวหน้าโครงการวิจัย (PI)** Principal Investigator
   - 6. 👨‍🔬 **ผู้ช่วยวิจัย** Research assistant — ต้องระบุ**ชื่อ PI ที่สังกัด**
   - 7. 🎒 **นักศึกษา** Student — ต้องระบุ**ชื่อ PI ที่สังกัด**
   - 8. 🛡️ **เจ้าหน้าที่ศูนย์สัตว์ทดลอง** LASC staff — ไม่ต้องระบุ PI

   Choose your role. A research assistant or a student must also give the **name of the PI** they work under — adding the **PI's email** makes the match reliable. Then press 「📝 ลงทะเบียน」 **(Register)**.
9. **Wait for staff approval.** You will be notified by email, normally within one working day.
10. Once approved, the badge at the top right changes to ☁️ ซิงก์แล้ว (synced) and you can select your protocol numbers.

ระหว่างรออนุมัติทำอะไรได้บ้าง

What you can do while waiting for approval

สถานะบัญชี Account status	สิ่งที่ทำได้ What is available
⏳ รออนุมัติ Pending approval	You can save reports (kept on your device and uploaded automatically once you are approved); **emergency alerts work immediately, no waiting**; but the protocol list is not visible yet.
✅ อนุมัติแล้ว Approved	Full access. Your data syncs to every device you sign in on with the same account, and you see only your own reports.

Can't find your protocol number? Protocols are imported into the system by LASC staff from the animal research ethics system (animalethic.research.psu.ac.th), and **you must be signed in to see the list**. If you are signed in and your protocol is still missing, contact the staff and give them the protocol number.

🔒 **Protocol confidentiality. Project details** (title, PI, species, approved number) are shown only to the **PI who owns the protocol**, the **research assistants and students registered under that PI**, and **LASC staff**. Everyone else sees the **protocol number only**. This is why the **role** and the **PI's name** you give at registration matter — if they do not match the project registry, you will not see your own team's project details.

Forgot your password? Press 「🔑 เข้าสู่ระบบ」 (Sign in) → type your email → press **「ลืมรหัสผ่าน」 (Forgot password)**. A reset link is emailed to you — check your spam folder too.

3. รายงานการปฏิบัติต่อสัตว์ทดลอง Reporting a procedure

Use the 「📝 **รายงานใหม่**」 **(New report)** tab. Every field on the form carries an English label.

1. **เลือกเลขที่โครงการวิจัย** Protocol number
   Type in the search box to filter by protocol number, project title or principal investigator. The system then shows the project details, the approved number of animals and the remaining balance.

2. **กรอกข้อมูลสัตว์** — ชนิดสัตว์ Species · เพศ Sex · สายพันธุ์ Strain · จำนวน Number of animals
   Enter the animal details. The system pre-fills them from the protocol; change them if the batch you are reporting differs.

3. **เลือกรายการที่รายงาน** Procedure reported
   Choose exactly one procedure, then fill in the panel that opens (see the table below).

4. **กรอกวันที่ดำเนินการ สถานที่ และชื่อผู้รายงาน** แล้วกด 「💾 **บันทึกรายงาน / Save report**」
   Enter the date performed, the location and the reporter's name, then press 「💾 **บันทึกรายงาน / Save report**」.

ข้อมูลที่ต้องกรอกในแต่ละรายการ

Details required for each procedure

รายการ Procedure	ข้อมูลเพิ่มเติม (ช่องที่มี * ต้องกรอก) Additional details (fields marked * are required)
⚖️ **การุณยฆาต** Euthanasia	*** วิธีการ** เลือก 1 จาก 3 วิธี Method — choose one of three • การฉีดยาสลบเกินขนาด — *Overdose anesthetic drug injection* • การสูดดมยาสลบเกินขนาด — *Overdose anesthetic drug inhalation* • การสูดดมก๊าซคาร์บอนไดออกไซด์ — *Carbondioxide inhalation* Optional: agent used · dose · person performing it · reason · confirmation of death · carcass disposal.
🚚 **เคลื่อนย้ายออกนอกสถานที่** Off-site transport	*** Destination** · purpose · person responsible during transport · vehicle · travel time · return plan and expected return date · welfare measures during transport.
🕊️ **สัตว์ตายระหว่างการศึกษา** Died during the study	*** Date the animal was found dead** · time found · who found it · suspected cause · whether a necropsy was done · signs before death / necropsy findings · whether a vet was informed · carcass disposal.

After saving, the system issues a report number in the form `AR-2569-0001` and takes you straight to the 「📚 ประวัติการรายงาน」 (History) tab.

One report = one procedure for one group of animals. If you need to report several procedures or several groups (for example euthanasia of 10 males and 8 females), save them as separate reports. The system adds the numbers up for you in the summary and against the protocol's approved number.

If the system warns that you are over the approved number, check the figures again before confirming. If you genuinely need more animals, you must first obtain an approved protocol amendment from the Animal Research Ethics Committee.

4. 🚨 แจ้งเหตุฉุกเฉิน / ปัญหาสุขภาพสัตว์ Emergency & animal health alert

> **In a critical case, always phone first.** Seizures, laboured breathing, heavy bleeding, an escaped animal or a failure of the room's systems: tap the **red phone button** on the alert page to call the veterinarian straight away, and submit the form afterwards.

1. Tap the red **「🚨 แจ้งเหตุฉุกเฉิน」 (Report an emergency)** button at the top right, or open the 「🚨 แจ้งเหตุ / สุขภาพสัตว์」 tab.
2. Choose the **type** — 🚨 emergency (you must also pick the kind of incident) or 🩺 an animal health problem.
3. **เลือกระดับความเร่งด่วน** Urgency level
   - 4. 🔴 วิกฤต
     Critical — a veterinarian is needed immediately; phone as well.
   - 5. 🟠 เร่งด่วน
     Urgent — should be examined within 2–4 hours.
   - 6. 🔵 ทั่วไป
     Routine — examination within the working day, or a request for advice.
7. Identify **the animals affected** — protocol number (if any) · location / animal room * · species * · number of animals * · cage number or animal ID.
8. Tick the **clinical signs** you observed (several may apply) · date and time first noticed * · description of what happened * · what you have already done.
9. 📷 **Attach up to 3 photos.** On a phone you can shoot straight from the camera; the system resizes the images for you. Tap a photo to view it full size, or ✕ to remove it.
10. Enter **your name * and a phone number you can be reached on right now ***, then press **「🚨 ส่งแจ้งทีมสัตวแพทย์」 (Send to the veterinary team)**.

> **When you submit**, the system issues an alert number such as `VA-2569-1016-K3F7`, places it in the veterinary team's inbox, sends a **LINE message and an email** to every vet who covers that urgency level, and shows the emergency phone button so you can call as well.

ติดตามผลหลังแจ้ง

Following up after you report

The status is shown in the list at the bottom of the alert page.

🆕 รอรับเรื่อง → 📥 รับเรื่องแล้ว → 💉 กำลังดูแลรักษา → ✅ ปิดเรื่องแล้ว

New → Acknowledged → Under treatment → Closed

- You can edit the alert or add details and photos **while it is still "New"** (the ✎ button).
- The veterinarian records their advice and the outcome in the alert, and emails the result to you.
- If the alert is closed with the outcome **euthanasia** or **animal died**, open it and press **「📝 ทำรายงานจากเรื่องนี้」 (Create a report from this alert)**. The report form is filled in for you — check it and save.

> You can raise an alert even if **your account is not approved yet** or you are not signed in at all. In that case the veterinary team will contact you on the phone number or email you provided.

5. ดู แก้ไข พิมพ์ PDF และส่งออก Excel History, PDF and export

The **「📚 ประวัติการรายงาน」 (History)** tab — you see only your own reports.

ปุ่ม Button	ใช้ทำอะไร What it does
👁 ดู View	Opens the full details of the report.
📄 PDF	Prints the A4 report form with signature blocks for the reporter, the staff member and the veterinarian / committee chair. In the print dialog you can choose "Save as PDF".
✎ แก้ไข Edit	Edits a saved report; the approved-number balance is recalculated.
🗑 ลบ Delete	Deletes a report saved in error or by mistake twice.
⬇ ส่งออก Excel (CSV) Export to Excel (CSV)	Exports whatever the current filters show; opens directly in Excel.
⬇ สำรองข้อมูล (JSON) Back up (JSON)	Saves your local data to a file — recommended if you are not signed in.

You can filter by protocol, procedure, date range, and a free-text search over reporter, species, strain and remarks.

6. ติดตั้งเป็นแอปบนมือถือ/คอมพิวเตอร์ Install as an app

Once installed it behaves like any other app, with its own icon — it opens faster, which matters when you need to raise an emergency alert.

อุปกรณ์ Device	**วิธีติดตั้ง** How to install
Android (Chrome)	Open the site → menu ⋮ → **Add to Home screen** (or use the 「⬇ ติดตั้งแอป」 button inside the system).
iPhone / iPad (Safari)	Open the site → Share ⬆ → **Add to Home Screen**.
คอมพิวเตอร์ (Chrome/Edge) Desktop	Click the ⊕ icon at the end of the address bar, or menu ⋮ → **Install**.

> When a new version is released, a 「🔄 **มีแอปเวอร์ชันใหม่**」 **(new version available)** bar appears — tap it to update.

7. คำถามที่พบบ่อย Frequently asked questions

ต้องรายงานเมื่อไร

When must I report?

Report every euthanasia, every off-site transport of animals, and every animal that dies during the study. Do it immediately, or within one to two working days, so that the remaining animal numbers in the system stay current.

รายงานผิด แก้ไขได้ไหม

Can I correct a report?

Yes. In the 「📚 ประวัติการรายงาน」 (History) tab, press ✎ to edit or 🗑 to delete and save it again. The approved-number balance is recalculated automatically.

เข้าสู่ระบบเครื่องอื่นแล้วข้อมูลอยู่ไหม

Will my data be there on another device?

Yes, if your account is approved — your data syncs automatically with the centre's central system. If you are not signed in, the data stays on that one device only.

ปิดเบราว์เซอร์แล้วข้อมูลหายไหม

Do I lose my data when I close the browser?

No — the system also stores your data on the device. But clearing browser data or using private/incognito mode can lose anything not yet synced, so it is best to stay signed in.

อินเทอร์เน็ตหลุดระหว่างกรอก

What if I lose my internet connection?

You can still save normally. The system tells you the upload failed and sends it automatically the next time you open the system while online. Photo attachments are the exception — they need a connection at the time you submit.

แจ้งเหตุแล้วสัตวแพทย์ได้รับจริงไหม

How do I know the vets received my alert?

After you submit, the system reports how many LINE and email channels succeeded. If it reports a failure, press **「✉ เปิดร่างอีเมล」 (Open a draft email)** and send it — and in a critical case, **phone the vet directly**.

ใช้บัญชีเดียวกับระบบอื่นของศูนย์ฯ ได้ไหม

Can I use my account from the centre's other systems?

No. This system has its own separate database and user accounts, so you need to register here again.

8. เช็กลิสต์ก่อนกดส่ง Checklist before you submit

รายงานการปฏิบัติต่อสัตว์

Procedure report

- ☐ The **protocol number** is the correct, approved one.
- ☐ Species, sex and strain **match the animals actually used**.
- ☐ The **number of animals** is correct and within the protocol's remaining balance.
- ☐ The **procedure** is selected and every field marked * is filled in.
- ☐ The **date performed** is the date it actually happened.
- ☐ The reporter's name and contact details are correct.

แจ้งเหตุฉุกเฉิน / สัตว์ป่วย

Emergency / health alert

- ☐ For a critical case — **you have phoned already**.
- ☐ The **location / room and cage number** are precise, so the vet can find the animal at once.
- ☐ The **clinical signs** are ticked and you have described what you know.
- ☐ A **photo** of the signs or the scene is attached, if you could take one.
- ☐ The **phone number** you gave is one you can answer right now.

ติดต่อศูนย์สัตว์ทดลอง Contact the centre

For questions about using the system, account approval or importing a protocol number, contact the staff of the Laboratory Animal Service Center, Prince of Songkla University · email psu.labanimals@gmail.com

The veterinarians' emergency numbers appear as **red buttons** on the 「🚨 แจ้งเหตุ / สุขภาพสัตว์」 (Alert) page inside the system — tap one to call straight from your phone.
